

NSE Screener Android App - APK Build Guide

Project Information

- **App Name:** NSE Screener
 - **Package:** com.kamalg.nsescreener
 - **Version:** 1.0.0
 - **Framework:** React Native with Expo
-

Build Options

Option 1: Using Expo Build Service (Recommended - Easiest)

Prerequisites:

- Expo Account (create at <https://expo.dev>)
- Expo CLI installed

Steps:

```
# 1. Login to Expo
expo login

# 2. Navigate to project
cd /Users/kamal/IdeaProjects/nse-screener-app-android

# 3. Build APK for Android
eas build --platform android --profile preview

# 4. Wait for build to complete (usually 5-15 minutes)
# 5. Download APK from the build URL
```

Pros: No local Android setup needed, cloud-based, reliable

Cons: Requires Expo account (free tier available)

Option 2: Local Build with Android SDK

Prerequisites:

- Android SDK installed
- Java Development Kit (JDK 11+)
- Android Studio (optional but recommended)

Steps:

```
# 1. Generate native Android project
cd /Users/kamal/IdeaProjects/nse-screener-app-android

# 2. Use Expo prebuild (generates android folder)
npx expo prebuild --clean
```

```
# 3. Build APK
cd android
./gradlew assembleRelease

# 4. APK will be at: android/app/build/outputs/apk/release/app-release.apk
```

Pros: Full control, no external service dependency

Cons: Requires local Android SDK setup, slower initial setup

Option 3: Using EAS CLI (Modern Approach)

Prerequisites:

- EAS CLI: `npm install -g eas-cli`
- Expo Account

Steps:

```
# 1. Login and initialize
eas login
eas init

# 2. Build Android APK
eas build --platform android

# 3. Download from dashboard
```

Pros: Modern tooling, simple process

Cons: Requires EAS account

APK File Details

Generated File: `NSE-Screener-1.0.0.apk` (~50-80 MB)

What's Included:

- React Native runtime
- All app screens and features
- Real data fetcher
- Screener engine
- Backtest engine
- Charts and visualizations
- Settings and configuration

Minimum Requirements:

- Android 5.0 (API 21) or higher
 - ~100 MB free storage
 - Internet connection for GitHub data
-

Installation on Android Device

Via APK File Direct:

1. Download APK file
2. Transfer to Android device
3. Go to Settings → Security → Enable "Unknown Sources"
4. Open file manager, find APK
5. Tap to install
6. Launch "NSE Screener" from app drawer

Via ADB (Advanced):

```
adb install NSE-Screener-1.0.0.apk
```

✅ Verification

After installation, verify:

- ☒ App launches without errors
- ☒ Home tab loads opportunities
- ☒ Charts open on stock click
- ☒ Backtest functionality works
- ☒ Settings sliders are responsive
- ☒ Refresh buttons work

🔧 Troubleshooting

"App crashes on launch"

- Ensure Android 5.0+
- Check internet connection for data fetching

"Data not loading"

- Verify internet connection
- App will use mock data as fallback

"Charts not displaying"

- Ensure device has enough memory
- Try closing other apps

📞 App Support

GitHub Repo: [kamalg1989/nse-screener-app-android](#)

Features Included:

- ☒ Daily screener with real NSE data
- ☒ Backtest analysis with forward period
- ☒ EMA-based technical analysis

-  Risk/Reward calculation
-  Interactive charts

Data Source: GitHub (nse-market-data repository)

Next Steps

1. **Choose build method** (Option 1 recommended)
2. **Follow build steps** for your chosen method
3. **Download APK** from build output
4. **Test on device** before sharing
5. **Share APK** with others via email, Drive, etc.

Happy trading!
